

# This Month in the Garden

## January Tasks

A gardener's work is never done. Further, while it is cooler outside you might want to tackle some of those harder labor tasks. Here are some things that may need your attention this month.

- Do you have trouble keeping track of your plants and their needs? A gardener's journal may be just the solution you are seeking. You could start one this month with notes about what plants are planted, where they are planted and then add information about what each one needs. Throughout the year, you can track plant fertilization, problems, bloom times and so much more information. These notes may help you make decisions in the future based on what works and what did not. Journals can be paper or electronic. Just make sure to use something easy for you. Learn [how to keep a garden journal](#).
- If you have St. Augustine grass, you will want to make sure you keep fallen leaves off it. It may not go completely dormant and still needs sunlight.
- If you have citrus trees, you should clean up any fruit that has fallen to the ground. Rotting fruit is not only unpleasant but attracts insect pests.
- Plant roses and bare-root fruit and nut trees. The longer these plants have to grow roots, the more resilient they will be during the heat of summer. Use the [Earth-Kind® Plant Selector](#) to help choose the best ones for your garden.
- If you have shrubs or small trees you want to relocate, this is the month to do so. You will work up less of a sweat while it is cooler and the plant will have more time to recover before summer.
- Prune your roses and other dormant trees and shrubs while they are not growing. Learn the [Earth-Kind® techniques to properly prune your plants](#).
- Start seeds indoors for late winter or spring planting. These might include your spring veggies such as broccoli, cabbage, cauliflower, lettuce, and more. Learn [how to start seeds indoors](#).
- Plant any spring-blooming bulbs you still have. This article about [spring-blooming bulbs](#) might inspire you.
- Gather up materials to protect immovable plants during freezes. Learn [how to protect your plants](#).

## January Color in Fort Bend County

If you are looking to add some color to the dreary January garden, here are some cool season annuals to perk up your garden.

- [Ornamental Kale](#): Ornamental kale or ornamental cabbage is known for its lovely purple, pink, white, red-bronze, or yellow-green foliage. Growing to a size of 8 to 18 inches wide in a rosette that will eventually produce flowers. However, the foliage is really the best feature.
- [Narcissus](#): The narcissus family includes daffodils, jonquils, paperwhites, and narcissus. Plant these charmers in full sun and then enjoy the lovely blossoms.
- [Pansy](#): These come in a wide variety of colors that are sure to fit into your garden but plant them up front because they only grow 4 – 10 inches tall. They do best in sun or partial sun.
- [Johnny-Jump-Up](#): These tri-color cuties typically have yellow, blue and purple on the same blossom. Like the other January color listed here, these will do best in sun or partial sun.
